

EcoPoxy Resin and Build Hardener is an advanced 100% solids high performance epoxy laminating system.

Our **Build Kits** are typically used to fabricate high-performance composite parts or repairs. They can also be used for woodwork and repairs or additions to existing structures. **Build Kits** are compatible with most fabrication techniques, such as layup, filament winding, and vacuum bagging. **Build kit** features excellent wet out and adhesion to fiberglass, carbon, Kevlar, and other fibers. Its low odor allows it to be used indoors and outdoors without masks or ventilation. It cures at room temperature, and the cured resin can be sanded, shaped, machined, drilled, and tapped to your liking.

EcoPoxy Resin and build hardener is formulated to manufacture high performance structures with or without post-curing.

KEY FEATURES

- 100% Solids
- 100% water proof
- Excellent chemical resistance and hardness
- High adhesion
- Good clarity and gloss retention
- Low viscosity
- Non Toxic, Low Odor, Low VOC's
